SUMMARY

Software Engineer / Backend Developer with 1+ year of production experience developing and maintaining e-commerce management platforms using PHP and Vue.js 3. Demonstrated proficiency in modern Laravel 11 architectures, high-performance runtimes (FrankenPHP Octane), Redis concurrency control (distributed locking, background queue workers), and full-stack interfaces with Vue 3 & Nuxt 3. Focused on clean Service-Layer architecture, transactional data integrity, and automated testing.

EXPERIENCE

TTR Group, Ho Chi Minh City, Vietnam **Sep 2025 – Present**

Junior PHP / Full-Stack Developer

- Developed and maintained backend services and RESTful APIs using PHP (CodeIgniter 4) and Vue.js 3 for an enterprise e-commerce platform.
- Implemented TikTok Shop webhook processing with HMAC signature verification, event deduplication, and applied Factory & Strategy patterns for external fulfillment integrations.
- Engineered Redis queue workers to handle asynchronous product mapping, variant synchronization, and automated retries for large batch payloads.
- Built the end-to-end Return/Refund Ticket module with multi-step business validation in CodeIgniter 4 and reactive management UI in Vue 3 with Pinia.
- Optimized MySQL performance by eliminating N+1 queries, indexing slow queries, and leveraging Redis caching; integrated MinIO object storage and Telegram Bot API alerts with isolated fault handling.

TMA Solutions (TMA Foundation Training), Quy Nhon City, Vietnam **Nov 2023 – Dec 2023**

Software Engineering Trainee

- Practiced RESTful backend service development and collaborative Agile/Scrum workflows with Git version control and code reviews.

PROJECTS

CineReserve — Real-Time Cinema Ticket Booking Platform **github.com/hiimthien/cinereserve**

Stack: PHP 8.3, Laravel 11, Vue 3 (TypeScript), Redis, Laravel Reverb, MySQL 8.0, Docker Compose

- Prevented double-booking race conditions using Two-Phase Locking: Redis atomic locks (SET NX EX, 600s TTL) at memory layer and MySQL pessimistic locking (SELECT FOR UPDATE) during transaction checkout.
- Broadcast real-time seat status across concurrent clients via Laravel Reverb WebSockets without polling overhead; built reactive seat matrix in Vue 3 with Pinia.
- Implemented anti-fraud QR ticket check-in and idempotent payment webhook handling, covered by automated feature test suites.

ConsultFlow — High-Performance SaaS Booking Platform **github.com/hiimthien/saas-booking**

Stack: PHP 8.3, Laravel 11, FrankenPHP (Octane), Nuxt 3, PostgreSQL 14, Redis, Tailwind CSS, Docker Compose

- Engineered high-throughput SaaS backend using Laravel 11 with FrankenPHP Octane worker mode and PostgreSQL 14 for multi-role consultation scheduling.
- Designed double-booking conflict prevention logic with transactional validation for consultant availability and time-slot allocations.
- Built internal ledger-based wallet balance system for consultation bookings with strict database transaction integrity and automated test suites.

EDUCATION

Nha Trang University **Sep 2019 – Sep 2022**

Associate Degree in Information Technology, GPA: 3.4 / 4.0

SKILLS & ADDITIONAL

Languages & Frameworks: PHP 8+, JavaScript (ES6+), TypeScript, Laravel 11, CodeIgniter 4, Vue.js 3, Nuxt 3, Tailwind CSS

Databases & Caching: MySQL 8.0, PostgreSQL 14, Redis (Distributed Locking, Caching, Queue Workers)

Architecture & Runtime: FrankenPHP (Laravel Octane), Service-Layer Pattern, RESTful APIs, Webhook Processing, WebSockets (Reverb)

DevOps, Testing & Tools: Docker Compose, PHPUnit (Feature Testing), Git, GitHub Actions (CI/CD), Postman, MinIO
