CAO LUONG THIEN

Thu Duc City, Ho Chi Minh City, Vietnam | (+84) 388 145 796 | thiencao.work@gmail.com | github.com/hiimthien

SUMMARY

Junior PHP Developer with 1+ year of hands-on experience developing and maintaining production e-commerce systems using PHP and CodeIgniter 4. Practical expertise in RESTful API development, webhook event processing, third-party integrations (TikTok Shop API, Telegram Bot API), MySQL database optimization, and Redis queue handling. Experienced in building responsive full-stack interfaces using Vue.js 3 and Pinia, with a focus on writing clean, maintainable backend code and resolving production issues.

EDUCATION

Nha Trang University **Sep 2019 – Sep 2022**

Associate Degree in Information Technology, GPA: 3.4 / 4.0

EXPERIENCE

TTR Group, Ho Chi Minh City, Vietnam **Sep 2025 – Present**

Junior PHP / Full-Stack Developer

- Developed and maintained backend services and RESTful APIs using PHP (CodeIgniter 4) and Vue.js 3 for an e-commerce management platform.
- Implemented TikTok Shop webhook processing, incorporating signature validation, event routing, and deduplication logic to reliably handle order, product, and return/refund events.
- Built order synchronization and fulfillment workflows utilizing Factory and Strategy patterns to integrate external fulfillment providers and synchronize tracking data.
- Developed background queue workers using Redis to manage product mapping, variant synchronization, batch updates, and retry mechanisms for large product payloads.
- Built the end-to-end Return/Refund Ticket module, implementing eligibility checks, status approval workflows in CodeIgniter 4, and reactive management interfaces in Vue.js with Pinia.
- Integrated AI content and image services with MinIO object storage, implementing MIME validation, thumbnail generation, WEBP conversion, and memory cleanup.
- Integrated Telegram Bot API for real-time order and system alerts, using isolated error handling to prevent external API failures from impacting core transaction flows.
- Optimized MySQL performance by resolving N+1 query issues, indexing slow queries, and utilizing Redis caching to reduce database load.

TMA Solutions (TMA Foundation Training), Quy Nhon City, Vietnam **Nov 2023 – Dec 2023**

Software Engineering Trainee

- Gained practical software engineering experience building RESTful backend services and understanding core web application patterns.
- Collaborated in an Agile/Scrum team environment, applying standardized Git workflows, code reviews, and industry version control practices.

PROJECTS

CineReserve — Real-time Cinema Ticket Booking System **github.com/hiimthien/cinereserve**

Stack: PHP 8.3, Laravel 11, Vue 3 (TypeScript), Redis, Laravel Reverb, MySQL 8.0, Docker Compose

Multi-role booking platform (Customer, Staff, Admin) with real-time seat reservation.

- Built an interactive seat selection matrix using Vue 3 (TypeScript) and Pinia for reactive client-side state management.
- Broadcast real-time seat availability across concurrent clients via Laravel Reverb & Echo without polling overhead.
- Prevented double-booking race conditions using Redis distributed locks (SET NX EX) and MySQL pessimistic locking (SELECT FOR UPDATE).
- Implemented anti-fraud QR check-in, idempotent payment webhooks, and Service-Repository architecture with Docker Compose.

SKILLS & ADDITIONAL

Programming Languages: PHP, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Backend: CodeIgniter 4, Laravel, RESTful APIs, Webhook Processing, Background Jobs

Frontend: Vue.js 3, Composition API, Pinia, Vue Router, Tailwind CSS, Bootstrap

Databases & Caching: MySQL (Query Optimization, Indexing), Redis (Caching, Queue)

Integrations & Tools: TikTok Shop API, Telegram Bot API, MinIO, Git, GitHub, Postman, Xdebug, VS Code
